

MANAGED SERVICES

Great managed services help you solve or avoid a problem, reach an aspiration or goal, or gain insight.

SIAX's Managed Services Offering does all three—our suite of offerings allows you to focus on growing and understanding new possibilities for your business, rather than assuming the ongoing responsibilities for managing your I.T.

Our **Essentials** packages provides you with monitoring, maintenance and alerting and you can simply call us when you need us, or include a set amount of hours per month.

With our **Fusion** package you will receive the Essentials inclusions plus unlimited onsite and remote support for everything covered within your agreement – **at a fixed monthly price.**

With optional services available for both packages, how you tailor your I.T. support is completely up to you...

At SIAX Computing Solutions we believe you should have a choice.... a choice in how your support is delivered.
