

PROFESSIONAL SERVICES

SIAX Computing Solutions offer quality professional I.T services to tailor to our client's needs.

Our team of trained professionals assist you in using industry leading technology, encompassing various types of hardware, applications, software and services which are tailored to solve, envision, and understand new possibilities for your business.

In our business, successful solutions combine superior technology with the people who apply it. We work side-by-side with our clients, refocussing them on managing their business objectives rather than managing the technology that their businesses are dependent on. We manage solution delivery and provide professional services, including evaluating, designing, and implementing IT infrastructure and business technologies.

Whether you need a specific skillset for a project, advice on your I.T requirements, or just need somebody to help with resolving niggling I.T issues, SIAX has you covered. Our flexible engagement models include Ad-Hoc, Scheduled or Fixed Price and are all designed to fit in with how you would like to engage.
